Javascript   HTML   CSS   webpack   git/Github

## PERSONAL PROJECTS

### PORTFOLIO WEBSITE
- The content of the website was generated by vanilla JS using a modular approach.
- Has a fully responsive animated design.
- Implemented a database connection on the contact form by using google Firebase to store contact messages of visitors.
- An object-oriented approach applied to generate multiple contents dynamically.
- Webpack is used to organize assets, babeljs, and autoprefixer css used for browser compatibility.
- EsLint's "airbnb" style guide applied.

### TO-DO LIST APP
- Developed using vanilla js and the design is fully responsive.
- Uses localStorage to save the data on user's browser.
- Makes use of object-oriented design.
- Webpack is used for organizing project assets.

### BOOK LIBRARY APP
- Developed using vanilla javascript and responsive css.
- Uses localStorage to save the data on user's browser.
- Uses object-orianted approach to render newly added html elemenets on the page
- Webpack is used for organizing project assets.

### RESTAURANT PAGE
- Developed using vanilla js and has responsive design.
- Webpack is used for organizing project assets.
- the content of the webpage rendered dynamically.
- The page content rendering logic is: if the user clicked the menu link? then: clear the current module and insert the menu module into the content.
